

Cams on a Half Shell

Proudly served by Dura-Bond

It Doesn't Cost a Lot of Clams to Have the Best!

Most builders know that finding the best means a little extra digging. So, Dura-Bond has carefully prepared a new line of cam bearings that simplifies aluminum head rebuilding.

Our "half shell" cam bearings allow builders to remanufacture and upgrade aluminum heads easily and economically without getting pinched.

- No need for expensive, oversize cams
- Eliminates welding of scored cam housings
- Thin-wall design minimizes housing stock removal
- Bearings made from race-proven Dura-Bond materials
- Low prices mean more profits to builders

These new cam bearings are the latest addition to our menu of quality, time-proven Dura-Bond products. They're economical, expertly prepared, and ready to be served.
